0.1 Main Features

- Syntax is similar to natural language
- Syntax is compatible with integration with voice control
- Ability to save queries, filters, and source combinations
- Ability to combine saved queries, filters, and source combinations
- Can value copy saved queries into the query currently being built
- Modal interpreter
- Extensible source design, defaults support Reddit, can create modules for other sources
- Syntax is tolerant of articles and some 'natural' variants of keywords
- Capable of querying on a variety of datatypes (fields?)
- tolerant of missing fields on merged queries (i.e. posts are missing tags)
- ordering of results can be controlled, with source specific defaults
